How Venomous Serpents Rill. Some persons speak of "snake-bites" and "poisonous snakes." If poison is swallowed it finds its way into the system through the stomach, with unpleasant and sometimes fatal results. The dangerous fluid in the serpent's head is venom, and must be injected into the blood in order to be effective. The New Orleans Times-Democrat explains that snakes do not bite. "Probably," it says, "no creature in the world provided with teeth and jaws has so little power of biting. The jaws are not hinged, but are attached one to the other by cartilege. Thus a snake can have no leverage in opposing one jaw to the other, and could not in this manner pierce the skin. The fangs are driven into the flesh by a stroke, not by a bite. A snake is harmless unless in coil. From its coil it throws its head and body forward, and strikes or hooks its fangs into the object aimed at. The
